

MEMORANDUM

TO: Sean McCarthy, Engineering Supervisor – Town of Scituate, MA

CC: Michelle West, P.E. – Horsley Witten Group
Garrett Bergey – SDE, Inc.

FROM: Janelle Bonn, Technical Manager
Collin Johansson, Engineer

DATE: September 27, 2022

RE: Scituate, MA MS4 General Permit Year 4 Dry Weather Outfall Screening Results

BACKGROUND AND PURPOSE

This memorandum summarizes the key findings and recommendations associated with outfall inspections and assessments conducted in support of the Town of Scituate's (Town's) Municipal Separate Storm Sewer System (MS4) Permit Year 4 Illicit Discharge Detection and Elimination (IDDE) Program and related MS4 General Permit requirements.

Woodard & Curran's subcontractor, Stacey DePasquale Engineering, Inc. (SDE), of Lawrence, Massachusetts, attempted to complete inspections of 213 of the approximately 326 outfalls located within the Town of Scituate in June 2022. One hundred and twenty-three outfalls were previously inspected in December 2020. A figure showing the locations of the outfalls investigated during this screening round is included in **Attachment A**.

INSPECTION AND ASSESSMENT METHODOLOGY

SDE followed the IDDE procedures outlined in the Town's IDDE Program Manual, which are based on requirements presented in Part 2.3.4.7.b of the MS4 General permit. The IDDE investigations included visual inspections of outfalls during dry weather periods, defined as a period with no more than 0.1-inch of precipitation or significant snowmelt within the previous 24 hours, to identify structures with flow during these conditions. If an outfall was inaccessible or submerged, SDE's field crew inspected the next upstream drainage manhole or catch basin to determine whether dry weather flow was present.

When dry weather flow was observed, samples were collected at the outfall or upstream drainage structure and analyzed for surfactants, ammonia, chlorine, pH, specific conductivity, temperature, E. Coli or enterococcus, salinity, and, if applicable, pollutants of concern associated with the receiving waterbodies.

DRY WEATHER FLOW THRESHOLD CRITERIA AND EVALUATION

Part 2.3.7.7.a of the MS4 General Permit lists the following threshold criteria as indicators for potential illicit discharges:

- Olfactory or visual evidence of sewage;

- Ammonia \geq 0.5 milligrams per liter (mg/L), surfactants \geq 0.25 mg/L, and bacteria levels greater than the water quality criteria applicable to the receiving water; or
- Ammonia \geq 0.5 mg/L, surfactants \geq 0.25 mg/L, and detectable levels of chlorine.

Based on the Massachusetts Surface Water Quality Standards (314 CMR 4.00) statistical threshold values for coastal, marine, and inland waters, enterococcus samples shall not exceed concentrations of 130 colony forming units per 100 milliliters (cfu/100 mL) and E.coli samples shall not exceed concentrations of 410 cfu/100 mL. Concentrations over this threshold generally indicate an elevated potential for sanitary sewage related contamination.

Outfall screening results are evaluated against these criteria to determine the likelihood of illicit discharges and prioritize future illicit discharge investigations. Although the threshold criteria listed above must be met to be considered an MS4 General Permit defined potential indicator of illicit discharges, some detections above the single parameter criteria warrant additional illicit discharge investigations, ranging in priority based upon the order of magnitude of the exceedance.

INSPECTION AND ASSESSMENT FINDINGS

Dry weather flow was observed at 84 of the 214 investigated structures during this round of inspections (39% of investigated structures). Of the 84 structures where dry weather flow was observed, 79 outfalls or upstream drainage structures were located and sampled. The remaining 5 structures were not sampled because they were either field verified as culverts or did not have any drainage structures connected to them (29-000-005, 46-000-001, 46-000-008, 48-000-01, and 52-000-002). Notable outfall screening and sampling results are discussed below.

Potential Illicit Discharge Threshold Criteria Outfalls

Dry weather flow collected from three of the outfalls (13-000-002, 36-000-002, and SDE-OF2) met Permit threshold criteria for potential illicit discharges associated with a sanitary sewer source. No visual or olfactory indicators of illicit discharges were noted during inspections. Based on the outfall screening results generated during this round of inspection and assessment activities, the catchment areas upstream of these locations should be assigned a "Problem" prioritization for future IDDE investigations. Screening results for each of these outfalls are discussed below

13-000-002

Testing of dry weather flow at outfall 13-000-002 identified elevated levels of ammonia (2.0 mg/L), surfactants (0.25 mg/L), and chlorine (0.1 mg/L). Bacteria were not reported above laboratory method detection limits and Permit individual threshold criteria. The sampling results at this outfall meet the Permit definition of a potential illicit discharge.

36-000-002

Testing of dry weather flow at outfall 36-000-002 identified low levels of ammonia (0.6 mg/L), and elevated concentrations of surfactants (2.0 mg/L) and chlorine (0.46 m/L). Bacteria were not reported above laboratory method detection limits and Permit threshold criteria. The sampling results at this outfall meet the Permit definition of a potential illicit discharge.

SDE-OF2

Testing of dry weather flow at outfall SDE-OF2 identified elevated levels of ammonia (2.0 mg/L) and chlorine (0.2 mg/L) and low concentrations of surfactants (0.25 mg/L). Bacteria were not reported above field instrument detection limits and Permit threshold criteria. The sampling results at this outfall meet the Permit definition of a potential illicit discharge.

Elevated Individual Permit Illicit Discharge Threshold Criteria Outfalls

Dry weather flow collected from three of the outfalls (35-000-002, 37-000-001, and 46-000-001) exhibited one or more field and/or analytical testing values significantly above individual Permit threshold criteria but do not meet the Permit-defined criteria for potential illicit discharges. Based on the outfall screening results generated during this round of inspection and assessment activities, the catchment areas upstream of these locations should be assigned an elevated prioritization for future IDDE investigations. Screening results for each of these outfalls are discussed below.

35-000-002

Testing of dry weather flow at outfall 35-000-002 identified elevated levels of E.coli (1,081 MPN/100mL) and low concentrations of surfactants (0.25 mg/L) and ammonia (0.1 mg/L). Chlorine was not reported above field instrument detection limits and Permit threshold criteria.

37-000-001

Testing of dry weather flow at outfall 37-000-001 identified elevated levels of ammonia (5.0 mg/L) and E.coli (6,131 MPB/100mL) well above their individual Permit threshold criteria. Chlorine and surfactants were not reported above field instrument detection limits and Permit threshold criteria, respectively.

46-000-001

Testing of dry weather flow at outfall 46-000-001 identified elevated levels of E.coli (2,987 mg/L). Ammonia, chlorine, and surfactants were not reported above field instrument detection limits and Permit threshold criteria, respectively.

ADDITIONAL LOCATIONS FOR FUTURE PRIORITIZATION CONSIDERATIONS

In addition to the six outfalls mentioned above, low level concentrations of potential illicit discharge indicators were identified in dry weather flow collected from 68 additional outfalls or, where outfalls were not sampled, related upstream structures. Detected concentrations of these parameters did not exceed Permit threshold criteria for illicit discharges. However, the locations listed in **Table 1** warrant an elevated prioritization for investigation during future catchment investigations based upon the presence of various low-level potential illicit discharge indicators detected in dry-weather flow samples above individual Permit threshold criteria that are not typical of flows comprised only of stormwater.

The tabulated data summary of the May 2022 IDDE outfall assessments is provided in **Attachment B**. Laboratory data sheets are provided in **Attachment C**.

MAPPING DISCREPANCIES & MAINTENANCE NEEDS

SDE identified and noted maintenance issues and mapping discrepancies during dry weather outfall screening activities. Several outfalls were not located during the investigations; however, these locations were not noted as mapping discrepancies because mapped upstream structures were identified and, in most cases, screened and/or sampled. Outfalls that were not located are noted in the table provided in **Attachment D?**.

SDE also identified and mapped three new outfalls during this round of investigations: SDE-OF1, SDE-OF2, and SDE-OF3. These outfalls have been added to the figure provided in **Attachment A**.

A summary of identified outfall condition issues is provided in **Attachment D**, and a summary of identified mapping discrepancies is provided in **Attachment E**.

OBSERVED POTENTIAL NON-STORMWATER FLOWS

The following potential non-stormwater flows were observed at investigated outfalls and/or upstream connected drainage structures that warrant further investigation by the Town:

Table 2: Potential Non-Stormwater Flows Observed in MS4 Infrastructure

Outfall/Upstream Drainage Structure	Observation(s)
13-000-002	Flow was observed in the main drainage pipe, with secondary flow entering the first upstream catch basin. A small PVC pipe was observed from the direction of #80 Townsend Road. A mailman informed SDE that this pipe has been flowing since Carriage Way was built.
55-000-008	The upstream sampled catch basin was observed channeling flow that SDE interpreted as coming from an inground pool.
24-000-001	The southwest inlet of the first catch basin, which is unmapped, appears to be channeling flow from a nearby stream.

Outfall/Upstream Drainage Structure	Observation(s)
75-000-003	A manhole located where the outfall is mapped appears to be channeling water from a sump pump or French drain at the adjacent residence.
57-000-002/Catch Basin Object ID 853	Trickle flow was observed entering the first catch basin upstream of this outfall from the direction of an adjacent yard that SDE attributed to a potential sump pump.

CONCLUSIONS

Field screening and laboratory testing of dry weather flows from outfalls conducted during MS4 Permit Year 4 for the Town of Scituate's IDDE Program identified results indicative of potential illicit discharges in some areas of the Town's storm drain system. Based on the outfall sampling results, elevated prioritization of catchments draining to outfalls 13-000-002, 36-000-002, SDE-OF2, 35-000-002, 37-000-001, and 46-000-001 are recommended to determine whether illicit discharges are present in these locations.

In addition, dry weather flows from several outlets contained levels of ammonia, surfactants, chlorine, and/or bacteria above individual Permit threshold criteria, as established by the MS4 General Permit. Catchments associated with these outfalls should be assigned a higher priority for investigation in relation to catchments where outfalls were observed to be dry or dry weather flow collected from outfalls contained concentrations of parameters below Permit individual threshold criteria.

RECOMMENDATIONS

The results of this outfall screening are required to be reported to the U.S. Environmental Protection Agency (EPA) and the Massachusetts Department of Environmental Protection (MassDEP) in the Town's Permit Year 4 Annual Report, due on September 28th, 2022.

The outfall screening information collected to date should be used by the Town to reprioritize the Town's outfalls prior to catchment investigation activities. Woodard & Curran recommends performing maintenance of drainage structures, where noted, to promote adequate flow of stormwater through the MS4. In addition, Woodard & Curran recommends the Town investigate and/or integrate identified MS4 mapping discrepancies into the Town's GIS database to reflect field observations noted during this portion of the IDDE investigation program.

Specifically, SDE identified the following outfalls as culverts during screening and sampling activities: 29-000-005, 56-000-001, 52-000-001, 52-000-002, WC-003, WC-004, 46-000-008, 48-000-001, 48-000-009, WC-023, 47-000-004, 23-000-002, 34-000-006, 65-000-008. In addition,

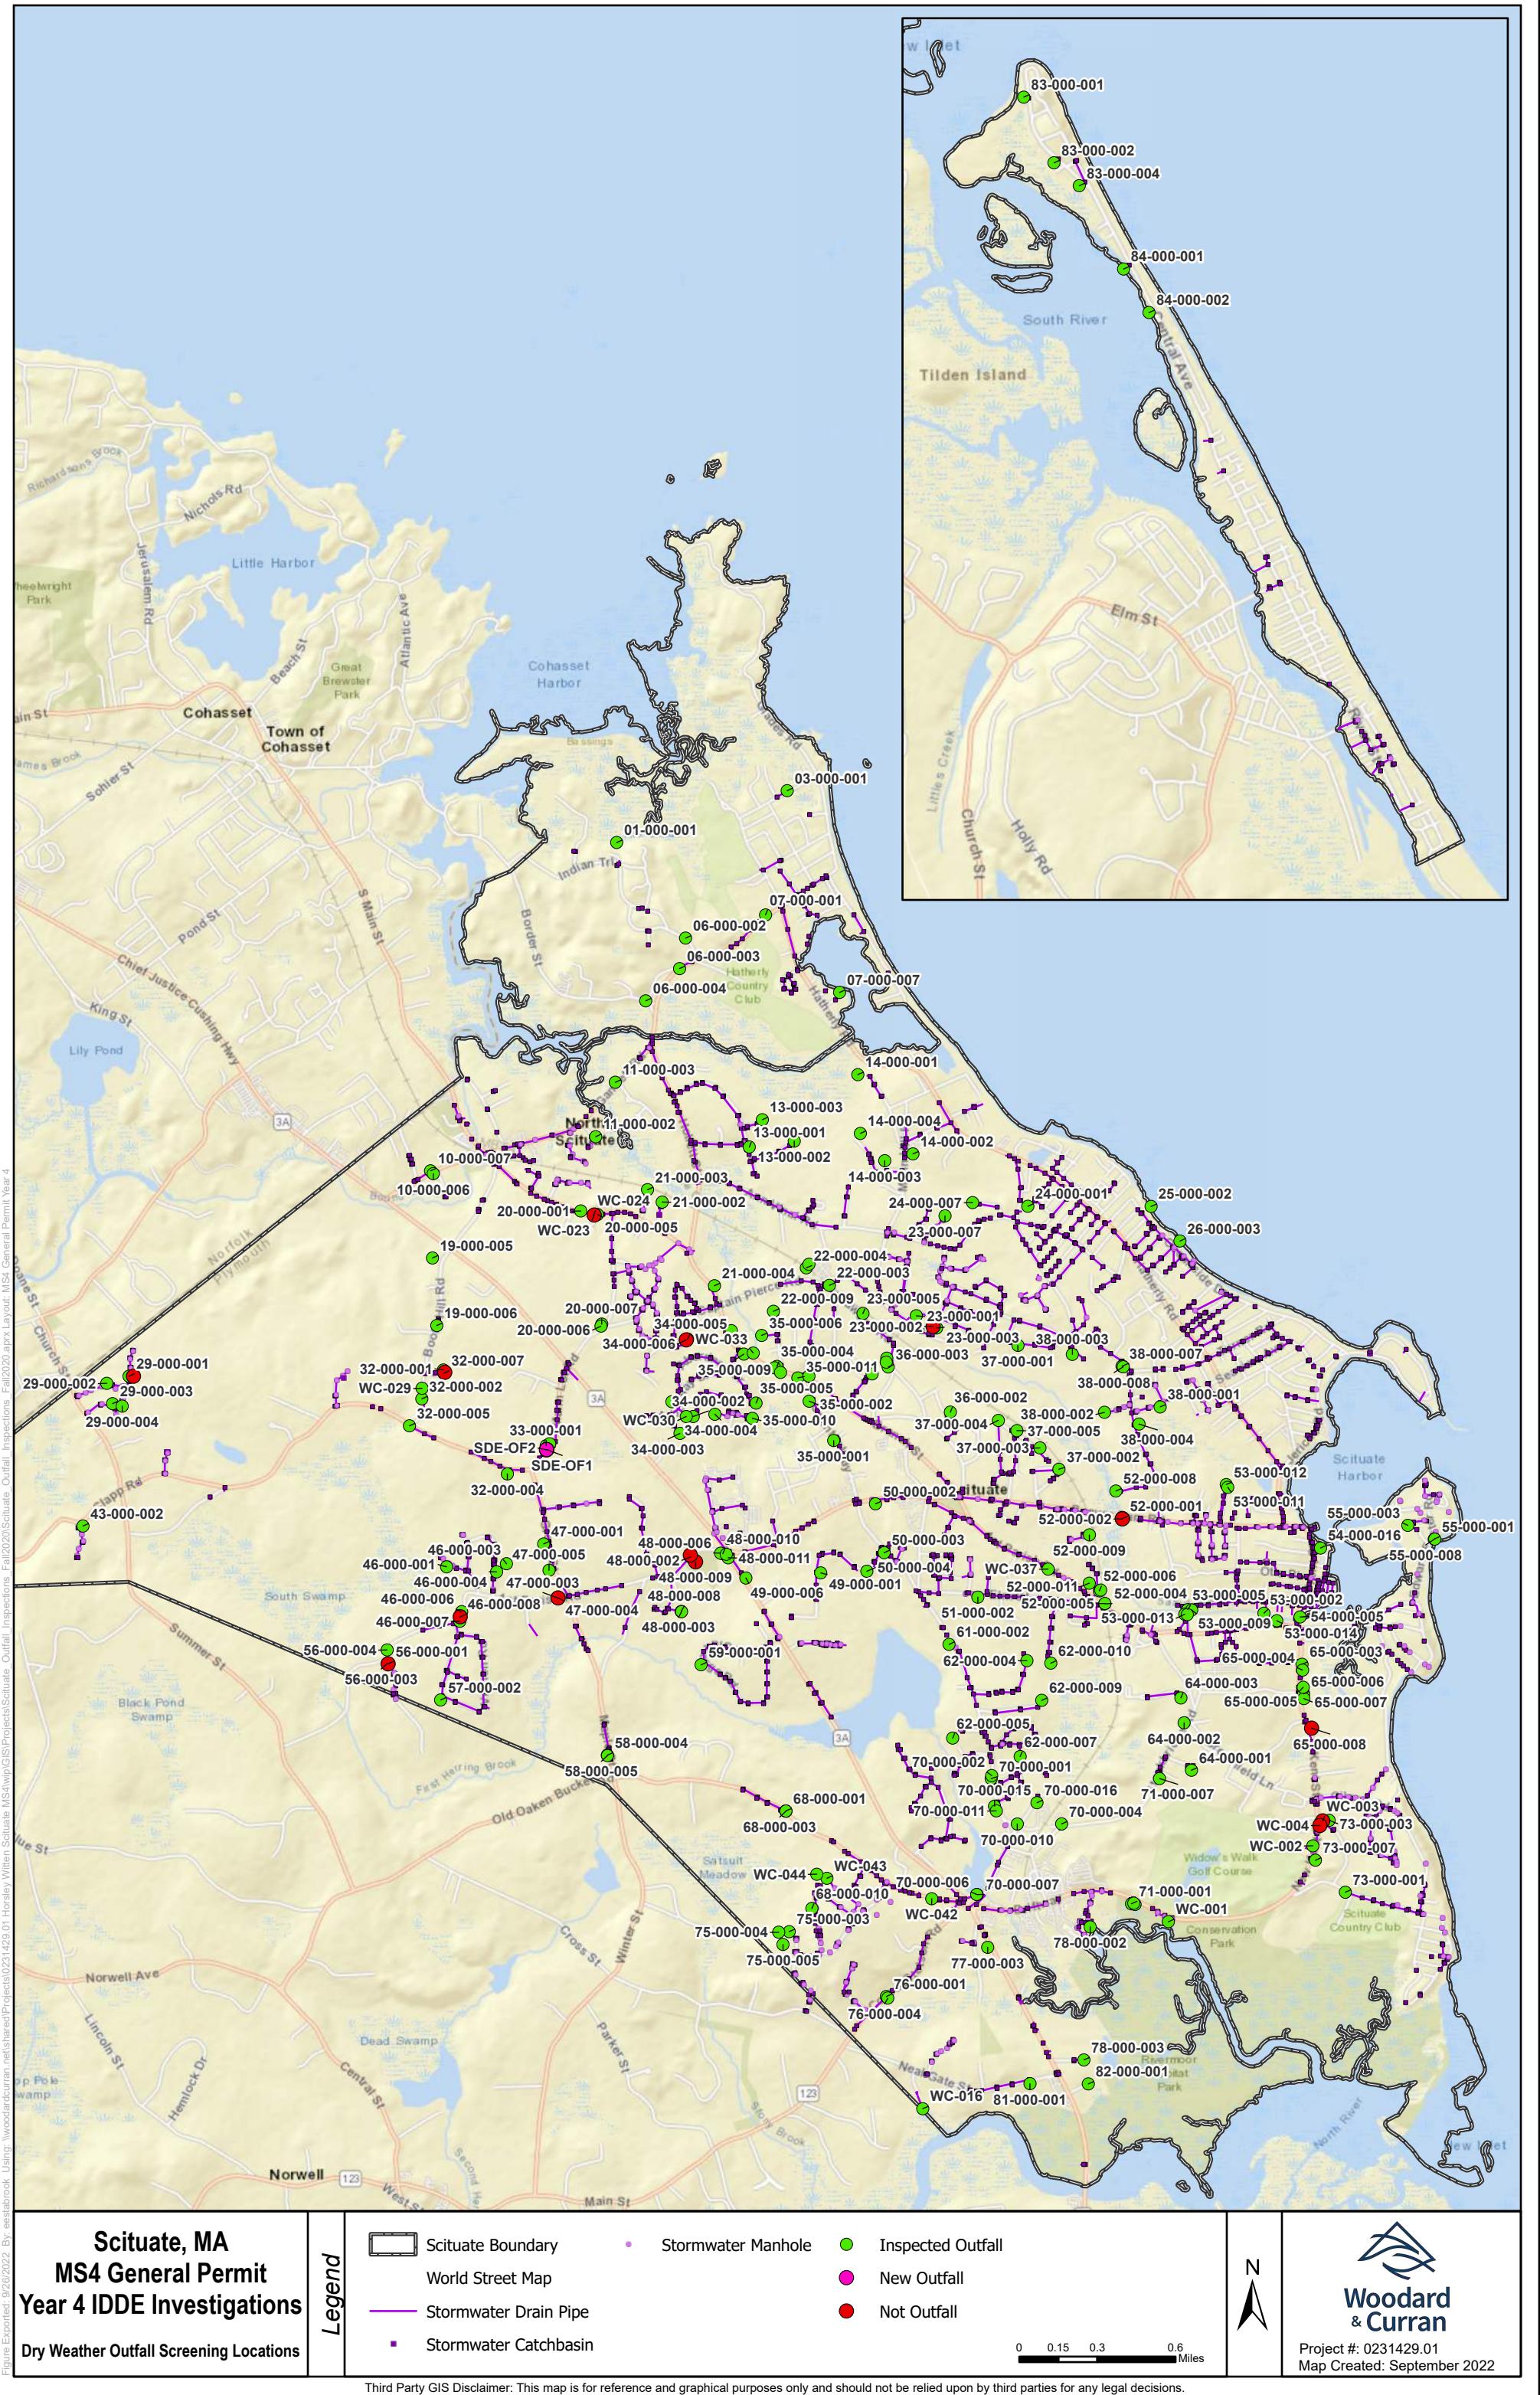

32-000-006 was identified as an outlet for a retention pond. These structures should be visually inspected to determine whether they are culverts and, if they are, they should be removed from the Town's MS4 IDDE program.

We also recommend the Town investigate the observations summarized in **Table 2** to determine whether non-stormwater discharges are entering the MS4 at these locations.

 Outfalls with analytical testing values above one or some individual identified Permit threshold criteria.

 Outfalls with elevated analytical testing values above Permit defined likely sewer input indicators.

Notes:

1. Where outfalls were not screened, the next upstream drainage structure was used to determine the presence of dry weather flows.
2. The number in this field is associated with the GIS Object ID.
3. The 0.02 mg/L criteria represents the detection limit for field instrument used during this screening. The MS4 General Permit individual threshold criteria for chlorine is "above detectable limits".
4. These sample threshold values are from 310 CMR 4.00 - Massachusetts Surface Water Quality Standards statistical threshold values for coastal, marine, and inland waters.
5. "--" = not sampled due to lack of flow, standing water, outfall/upstream drainage structure(s) not located/obstructed, or access denied
6. "ppm" = parts per million
7. "ppt" = parts per thousand
8. "NE" = no established MS4 General Permit threshold criteria for this parameter.
9. "<" = parameter not detected above field test instrument detection limit.
10. The MS4 General Permit defines likely sewer input indicators as ammonia, surfactant, and bacteria concentrations OR ammonia, surfactant, and chlorine concentrations above Permit threshold criteria.

LABORATORY REPORT

Woodard & Curran, Inc.
Attn: Stephanie Kaiser
250 Royall Street
Suite 200E
Canton, MA 02021

Date Received: 1/24/2022
Date Reported: 2/1/2022
P.O. Number

Work Order #: 2201-01199

Project Name: SCITUATE DRY WEATHER OUTFALLS

Enclosed are the analytical results and Chain of Custody for your project referenced above. The sample(s) were analyzed by our Warwick, RI laboratory unless noted otherwise. When applicable subcontracted results are noted and subcontracted reports are enclosed in their entirety.

All samples were analyzed within the established guidelines of US EPA approved methods with all requirements met, unless otherwise noted at the end of a given sample's analytical results or in a case narrative.

The Detection Limit is defined as the lowest level that can be reliably achieved during routine laboratory conditions.

These results only pertain to the samples submitted for this Work Order # and this report shall not be reproduced except in its entirety.

We certify that the following results are true and accurate to the best of our knowledge. If you have questions or need further assistance, please contact our Customer Service Department.

LABORATORY REPORT

Woodard & Curran, Inc.
Attn: Jannelle Bonn
250 Royall Street
Suite 200E
Canton, MA 02021

Date Received: 2/16/2022
Date Reported: 2/18/2022
Date Revised: 2/18/2022 REV A
P.O. Number

Work Order #: 2202-02453

Project Name: SCITUATE DRY WEATHER SCREENING

Enclosed are the analytical results and Chain of Custody for your project referenced above. The sample(s) were analyzed by our Warwick, RI laboratory unless noted otherwise. When applicable, subcontracted results are noted and subcontracted reports are enclosed in their entirety.

All samples were analyzed within the established guidelines of US EPA approved methods with all requirements met, unless otherwise noted at the end of a given sample's analytical results or in a case narrative.

The Detection Limit is defined as the lowest level that can be reliably achieved during routine laboratory conditions.

These results only pertain to the samples submitted for this Work Order # and this report shall not be reproduced except in its entirety.

We certify that the following results are true and accurate to the best of our knowledge. If you have questions or need further assistance, please contact our Customer Service Department.

Approved by:

Nicole Shyleson

Laboratory Certification Numbers (as applicable to sample's origin state):

Canton, MA 02021

Date Received: 2/21/2022
Date Reported: 2/23/2022
P.O. Number

Work Order #: 2202-02675

Project Name: SCITUATE DRY WEATHER OUTFALLS

Enclosed are the analytical results and Chain of Custody for your project referenced above. The sample(s) were analyzed by our Warwick, RI laboratory unless noted otherwise. When applicable subcontracted results are noted and subcontracted reports are enclosed in their entirety.

All samples were analyzed within the established guidelines of US EPA approved methods with all requirements met, unless otherwise noted at the end of a given sample's analytical results or in a case narrative.

The Detection Limit is defined as the lowest level that can be reliably achieved during routine laboratory conditions.

These results only pertain to the samples submitted for this Work Order # and this report shall not be reproduced except in its entirety.

We certify that the following results are true and accurate to the best of our knowledge. If you have questions or need further assistance, please contact our Customer Service Department.

Temp. Upon Receipt: 72° C
Containers: P=Poly, G=Glass, AG=Amber Glass, V=Vial, S=Sterile Preservatives: A=Ascorbic Acid, NH4=NH4Cl, H=HCl, M=MeOH, N=HNO3, NP=None, S=H2SO4, SB=NaHSO4, SH=NaOH, T=Na2S2O3, Z=ZnOAc

ATTACHMENT D: SUMMARY OF IDENTIFIED OUTFALL CONDITION ISSUES

Town of Scituate, MA
MS4 General Permit Year 4
Identified Outfall Condition Issues

Outfall ID	Inspection Date	Outfall Located	Outfall Accessible	Outfall Submerged	Submerged Percentage	Outfall Shape	Outfall Diameter (Inches)	Outfall Material	Condition Comments
WC-024	3/31/2022	Yes	Yes	No	--	Circular	12	Cast Iron	Pipe has corroded bottom.
07-000-007	4/5/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	Piece broken off.
13-000-002	4/5/2022	Yes	Yes	No	--	Circular	18	Polyvinyl Chloride	Repair recommended on upstream PVC pipe at 80 Townsend.
13-000-003	4/5/2022	Yes	Yes	No	--	Circular	12	Unknown	Pipe broken, barely present.
36-000-004	1/24/2022	Yes	Yes	No	--	Circular	12	Corrugated Metal Pipe	No other pipes located in this area. Pipe 75% full of sediment. Pipe could be abandoned.
06-000-004	4/5/2022	Yes	Yes	Yes	100	Unknown	Unknown	Unknown	Outfall and upstream catch basin completely submerged. Outfall had thick layer of algae growth, recommend cleaning.
53-000-013	1/25/2022	Yes	Yes	Yes	100	Circular	Unknown	Reinforced Concrete Pipe	Outlet full of sediment.
01-000-001	4/29/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	Vegetation surrounding outfall.
73-000-007	12/26/2021	Yes	Yes	No	--	Circular	12	Cast Iron	Overgrown with shrubs.
SDE-OF1	1/19/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	End of pipe deteriorating.
SDE-OF2	1/19/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	End of pipe is broken.
SDE-OF3	1/19/2022	Yes	Yes	No	--	Circular	8	Vitrified Clay	New outfall - unknown origin. Potential upstream feature inside not visible due to significant sediment.
38-000-002	1/25/2022	Yes	Yes	No	--	Circular	10	Reinforced Concrete Pipe	Brush has obscured outfall.
65-000-003	1/25/2022	Yes	Yes	No	--	Circular	20	Reinforced Concrete Pipe	Organic matter from marsh partially blocking outlet.
65-000-006	1/25/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	Organic matter from marsh partially blocking outfall.
70-000-001	1/26/2022	Yes	Yes	No	--	Circular	10	Reinforced Concrete Pipe	Pipe 50% full of sediment.
WC-032	3/9/2022	Yes	Yes	No	--	Circular	12	Corrugated Metal Pipe	Bottom of pipe is rusted out.
64-000-001	3/17/2022	Yes	Yes	No	--	Circular	Unknown	Reinforced Concrete Pipe	Outfall almost completely buried in dirt. 70% filled with sediment.
32-000-002	3/31/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	Outfall ~80% filled with sediment, recommend cleaning.
32-000-005	3/31/2022	Yes	Yes	No	--	Circular	12	Cast Iron	Difficult to locate, covered in leaves. Material is actually ductile iron.
WC-029	3/31/2022	Yes	Yes	Yes	30	Circular	12	Reinforced Concrete Pipe	Partially buried by yard waste/debris.
47-000-003	4/4/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	Pipe ending cracked but fair condition.
55-000-008	4/4/2022	Yes	Yes	No	--	Circular	15	Cast Iron	Outfall filled with rocks.
83-000-001	4/21/2022	Yes	Yes	No	--	Circular	6	High-Density Polyethylene	Some sediment buildup within pipe.
68-000-003	4/22/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	Slight corrosion at bottom of outfall.
62-000-007	4/29/2022	Yes	Yes	No	--	Circular	18	Polyvinyl Chloride	Algae on bottom of pipe.
56-000-004	1/12/2022	No	No	--	--	--	--	--	Possibly buried under dirt or submerged and frozen.
46-000-006	2/16/2022	Yes	No	Yes	100	Unknown	Unknown	Unknown	Outfall location assumed but pipe fully submerged with snow/debris
11-000-002	3/9/2022	No	No	--	--	--	--	--	Unable to locate outfall, likely buried
35-000-005	4/22/2022	No	No	--	--	--	Unknown	Not_Known	In area of heavy yard waste/leaves, possibly buried.

ATTACHMENT E: SUMMARY OF IDENTIFIED MAPPING DISCREPANCIES

Town of Scituate, MA
MS4 General Permit Year 4
Identified MS4 Mapping Inconsistencies

Outfall ID	Inspection Date	Outfall Located	Outfall Accessible	Outfall Submerged	Submerged Percentage	Outfall Shape	Outfall Diameter (Inches)	Outfall Material	Comments
29-000-005	1/12/2022	Yes	Yes	No	--	Horseshoe	18	Reinforced Concrete Pipe	Not an outfall but rather an inlet for a culvert. There is drainage connecting to the culvert but that information pertains to 29-000-001 as this is upstream of that drainage.
42-000-003	1/12/2022	Yes	Yes	No	--	Circular	6	Reinforced Concrete Pipe	Material is ductile iron
56-000-001	1/12/2022	Yes	Yes	No	--	Horseshoe	24	Reinforced Concrete Pipe	Outfall appears to be a culvert.
32-000-006	1/19/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	Outlet for retention pond
SDE-OF1	1/19/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	Newly identified outfall, SDE-OF1 at 193 Mann Lot Rd
SDE-OF2	1/19/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	Newly identified outfall. Orange buildup on pipe.
SDE-OF3	1/19/2022	Yes	Yes	No	--	Circular	8	Vitrified Clay	Newly identified outfall - unknown origin. Potential upstream feature inside not visible due to significant sediment.
52-000-001	1/25/2022	Yes	Yes	Yes	100	Circular	Unknown	Reinforced Concrete Pipe	Structure is not an outfall. Culvert inlet for street bridge
52-000-002	1/25/2022	Yes	Yes	No	--	Circular	24	Reinforced Concrete Pipe	Not an outfall. Culvert for street bridge.
76-000-001	1/26/2022	Yes	Yes	No	--	Circular	12	Reinforced Concrete Pipe	Structure at this location is an upstream catch basin for outfall 70-000-004
WC-003	1/26/2022	Yes	Yes	Yes	100	Circular	24	Reinforced Concrete Pipe	Structure confirmed to be a culvert
WC-004	1/26/2022	Yes	No	No	--	Circular	15	Reinforced Concrete Pipe	Structure confirmed to be a colvert
WC-005	1/26/2022	Yes	Yes	No	--	Circular	15	Reinforced Concrete Pipe	No upstream features mapped
46-000-008	2/16/2022	Yes	Yes	No	--	Circular	18	Reinforced Concrete Pipe	Structure is a culvert with no additional structures connected to it, no sample taken.
48-000-001	2/21/2022	Yes	Yes	No	--	Circular	15	Corrugated Metal Pipe	This point is an inlet to a culvert. No sample.
48-000-009	2/21/2022	Yes	Yes	No	--	Circular	15	Corrugated Metal Pipe	Believe outfall is just a culvert with upstream connectivity, therefore sample taken.
WC-044	3/17/2022	Yes	Yes	No	--	Horseshoe	Unknown	Reinforced Concrete Pipe	No sample as this "outfall" is just downstream piping from WC-043.
22-000-004	3/23/2022	Yes	Yes	No	--	Circular	24	Cast Iron	Location of mapping off, was closer to 22-000-005. Floatables were suds.
22-000-005	3/23/2022	Yes	Yes	No	--	Circular	6	Polyvinyl Chloride	No upstream piping mapped, could not investigate further.
19-000-005	3/31/2022	No	No	No	--		Unknown		No indication that this drainage area exists. Homeowner did not know of any structures either.
29-000-002	3/31/2022	Yes	Yes	No	--	Horseshoe	24	Reinforced Concrete Pipe	Outfall is slightly off in mapping. It is on the west side of #29 Captain Litchfield Ln.
32-000-005	3/31/2022	Yes	Yes	No	--	Circular	12	Cast Iron	Difficult to locate, covered in leaves. Material is actually ductile iron.
WC-029	3/31/2022	Yes	Yes	Yes	30	Circular	12	Reinforced Concrete Pipe	Outfall was partially submerged. No mapped upstream drainage, nearby catch basin was also submerged.
23-000-007	4/5/2022	Yes	Yes	Yes	70	Circular	12	Reinforced Concrete Pipe	Outfall standing water, upstream manhole mapped incorrectly. Flow from main line goes thru manhole, not catch basin.

Town of Scituate, MA
MS4 General Permit Year 4
Identified MS4 Mapping Inconsistencies

Outfall ID	Inspection Date	Outfall Located	Outfall Accessible	Outfall Submerged	Submerged Percentage	Outfall Shape	Outfall Diameter (Inches)	Outfall Material	Comments
23-000-003	4/13/2022	Yes	Yes	No	--	Circular	24	Reinforced Concrete Pipe	Outfall mapped as culvert. Followed upstream to standing water at 1528, unable to open 1530, could not locate 1531, sample taken at 1533.
38-000-008	4/14/2022	Yes	Yes	Yes	30	Circular	12		Outfall had standing water. First upstream catch basin had a northeast unmapped inlet coming from a stream that was trickling but not sampled as it was a culvert with no other infrastructure going into it. No northwest inlet present and southeast inlet was dry.
14-000-004	4/22/2022	Yes	Yes	No	--	Circular	14	Reinforced Concrete Pipe	Outfall had standing water filling about 60% of pipe. 1st upstream manhole (unmapped) had flow
35-000-010	4/22/2022	Yes	Yes	No	--	Horseshoe	24	Reinforced Concrete Pipe	Outfall very far from mapped location approximately 700' southeast of outfall point. Discharges close to school athletic fields. First upstream manhole was also dry.
24-000-001	4/29/2022	Yes	Yes	Yes	--	Circular	24	Reinforced Concrete Pipe	Unmapped catch basin receiving flow. Upstream of outfall is inlet receiving flow from nearby stream.
73-000-001	5/20/2022	Yes	Yes	Yes	80	Circular	12	Reinforced Concrete Pipe	Unmapped catch basin at entrance to golf course driveway.
19-000-006	1/19/2022	No	--		--	--	Unknown	--	Unable to locate outfall, mapped catch basins are not present either.
33-000-001	1/19/2022	No	--	--	--	--	--	--	Unable to locate outfall. Continued to upstream catch basin which does not have an outlet in direction of mapped outfall. Instead, goes to SDE-OF1.
33-000-002	1/19/2022	No	--	--	--	--	--	--	Unable to locate outfall. Continued to upstream cb which does not have an outlet in direction of mapped outfall. Instead, goes SW to catch basin within mapped boundaries of 33-000-001 (also could not locate). Flow then goes to SDE-OF1
23-000-005	1/24/2022	No	No	--	--	--	--	--	Could not locate outfall possibly behind MBTA safety fence.
36-000-003	1/24/2022	No	No	--	--	--	Unknown	--	Could not locate outfall. Catch basins 1178 and 1179 do not exist. Standing water at catch basins 1180, 1181 and 1182.
77-000-003	1/24/2022	No	No	--	--	--	--	--	No outfall located in the area. Outfall mapped location is a parking lot. The only drainage located was a catch basin with no outlets visible.
65-000-004	1/25/2022	No	No	--	--	--	--	--	Could not locate outfall. Possibly does not exist. Closest structure to mapped location services 65-000-003. Confirmed by sound testing catch basin at the intersection of Vinal Ave and Kent St. No upstream features located
50-000-004	1/26/2022	No	No	--	--	--	--	--	Could not locate outfall. Possibly does not exist. Upstream catch basin does not exist Outfalls 50-000-005 and 50-000-006 previously located.
71-000-003	1/26/2022	No		--	--	--	--	--	No upstream features mapped.

Town of Scituate, MA
MS4 General Permit Year 4
Identified MS4 Mapping Inconsistencies

Outfall ID	Inspection Date	Outfall Located	Outfall Accessible	Outfall Submerged	Submerged Percentage	Outfall Shape	Outfall Diameter (Inches)	Outfall Material	Comments
73-000-003	1/26/2022	No	No	--	--	--	--	--	Could not locate outfall. Possibly discharges into culvert. Upstream CB-2908 mapped incorrectly. Catch basin outlet points SW not NE. SW inlet does not exist.
52-000-011	2/16/2022	No	No	--	--	--	--	--	Could not locate outfall, no upstream features mapped.
53-000-012	2/16/2022	No	No	--	--	--	--	--	Could not locate outfall. Upstream catch basin dry. 12" HDPE pipe located near outfall location. Pipe coming from opposite direction
50-000-002	2/21/2022	No	No	--	--	--	--	--	Outfall does not appear to exist as mapped. First upstream catch basin did not have an outlet. Inlet was dry.
10-000-006	3/9/2022	No		--	--	--	Unknown	--	Unable to find outfall it is likely buried. First upstream feature has standing water, next seems to not exist.
21-000-004	3/9/2022	No	No	--	--	--	--	--	Unable to locate outfall, appears to be mapped incorrectly. First mapped upstream cb does not exist, second mapped upstream catch basin flows toward SE, third mapped upstream catch basin flows toward NE. suspected blind connection between 2nd and 3rd mapped catch basins to outfall.
64-000-003	3/17/2022	No	No	--	--	--	Unknown	Unknown	Dry at upstream catch basin. Outfall and first set of catch basins did not exist in field.
70-000-004	3/17/2022	No	No	--	--	--	Unknown	Unknown	Could not locate outfall. Upstream catch basin was dry but did not match pipe configuration as mapped.
75-000-005	3/17/2022	No	No	--	--	--	Unknown	Unknown	No outfall located in area. No upstream features mapped. Manholes in road discharge to north rather than to west.
WC-023	3/31/2022	No	No	No	--	--	Unknown	Unknown	Suspect WC-023 is actually a culvert inlet. No other structures present, no upstream mapping to investigate.
47-000-004	4/4/2022	--	--	--	--	--	Unknown	--	Unclear if structure is supposed to represent the flume like structure above the culvert or the culvert itself (which had no drainage structures discharging into it). The previous comment indicated it was an asphalt chute, which is dry.
47-000-005	4/4/2022	--	--	--	--	--	--	--	Could not locate outfall. Outfall that was located on north side of #72 Grove St that was standing water (suspect this is the actual location of outfall). No sample taken as the first 2 upstream catch basin did not exist.
23-000-002	4/5/2022	--	--	--	--	--	NA	--	The structure listed is actually the inlet to a culvert. The first upstream catch basin has no additional pipes going into it, therefore no sample taken. Did recommend cleaning the inlet as there is yard debris and trash at the inlet causing a slight blockage.
83-000-002	4/12/2022	No	No	--	--	--		--	Could not locate outfall or any upstream features. Mapped catch basin does not exist.

Town of Scituate, MA
MS4 General Permit Year 4
Identified MS4 Mapping Inconsistencies

Outfall ID	Inspection Date	Outfall Located	Outfall Accessible	Outfall Submerged	Submerged Percentage	Outfall Shape	Outfall Diameter (Inches)	Outfall Material	Comments
20-000-001	4/13/2022	No	No	No	--	Unknown	Unknown	--	Could not locate outfall, continued upstream to sample from catch basin, mapping is slightly off
34-000-004	4/14/2022	No	No	--	--	--	Unknown	Unknown	Outfall listed as upland discharge. No structures present in area and point is in school building on top of hill. No upstream piping to reference.
34-000-006	4/14/2022	No	No	--	--	--	Unknown	Unknown	Only a culvert where outfall is mapped. Upstream manhole where stream goes through culvert has dry inlets. Second upstream catch basin dry outlet.
65-000-008	4/21/2022	No	--	--	--	--	--	--	Oust a culvert where outfall is mapped. Upstream manhole where stream goes through culvert has dry inlets. Second upstream catch basin dry outlet.
35-000-009	4/22/2022	No	No	--	--	--	Unknown	Unknown	This outfall does not exist. Upstream catch basin corresponds to flow for outfall WC-033 and did not have a second outlet to this outfall area. It is assumed this outfall is a mapping error.
35-000-011	4/22/2022	No	No	--	--	--	Unknown	Unknown	Residents at neighboring home claimed there is an outfall and attempted to dig it out no pipe could be seen. Upstream catch basin appears to continue going NW along Country Way and possibly ties in to WC-034 but could not confirm. Upstream catch basin was dry.
68-000-001	4/22/2022	No	--	--	--	--	Unknown	--	No outfall appears to exist for this point. It is possibly a mapping error as 68-000-003 was present and there was also a culvert with no tied in pipes or other infrastructure. Photo of area of outfall on map attached.
84-000-001	4/22/2022	No	--	--	--	--	--	--	Outfall buried and drain pipe filled in, road was built up extra 6 inches so no longer exists
84-000-002	4/22/2022	No	No	--	--	--	--	--	Same area and circumstances as 84-001: filled in and covered with rocks
06-000-002	4/29/2022	No	No	--	--	--	Unknown	--	Cannot locate outfall, 273 outlet goes South toward 06-000-003.
46-000-004	5/20/2022	No	No	--	--	--	Unknown	Unknown	Outfall does not appear to exist. First upstream manhole mapped is actually going north (no piping going to direction of 46-000-004) and then discharging from there into 46-000-003 which was already sampled at the outfall. No sample taken.
58-000-004	5/20/2022	No	No	--	--	--	Unknown	Unknown	Mapping appears to be inaccurate. Could not locate any structures other than second upstream catch basin.

Notes:
