

Keep Wipes Out of Pipes

There are many new disposable wipes that claim to be "flushable" and "sewer safe." However, these wipes do not break down as they travel through pipes and into the sewer system. Wipes can create clogs in both household plumbing and the public sewer system and result in sewer backups. Do your part and keep these wipes out of pipes!

Don't Flush “Flushables”

Disposable wipes, even those labeled 'flushable' should be disposed of in the trash, not flushed down the toilet. Most wipes, including:

- Bathroom wipes
- Baby wipes
- Disinfecting wipes
- Towelettes

Do not degrade and can clog pipes and cause sewer backups.
